

## How does **MEDIHONEY® / Active *Leptospermum* Honey** help to support the healing of routine and challenging wounds?

### *Gel* vs *Paste Dressings*

- Helps to maintain a moist environment for optimal healing<sup>1-6</sup>
- High osmotic potential pulls fluid from deeper tissues to the wound surface, aiding in autolytic debridement<sup>1-6</sup>
- Low pH helps to lower the pH within the wound environment<sup>7,8</sup>, which has been shown to have wound healing benefits.<sup>9</sup>
- Is easy-to-use, non-toxic, natural and safe with the potential for extended wear times

#### *Gel*

#### *Paste*

- 80% Active *Leptospermum* Honey and 20% Natural Gelling agents
- More viscous formulation with increased stability at the site of the wound
- Demonstrated positive clinical outcomes<sup>1, 5, 6</sup>
- Optimal for superficial to full thickness wounds

- 100% Active *Leptospermum* Honey
- Demonstrated positive clinical outcomes<sup>2-4</sup>
- Optimal for deep tunneled or undermined wounds

Pair MEDIHONEY® with our super absorbent cover dressing, XTRASORB®. It's osmotic gradient pulls exudate to the back of the dressing and converts it into a gel, locking it away - even under compression!
